

Synopsis of Linear Associative Algebra A Report on Its Natural Development and Results Reached Up to the Present Time

By James Byrnie Shaw

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: . . . norm q , . . . i . . . r_n are primary prime tettariations of norm t , all being of the form 286. Definition. An integral tettarian is primitive if its coordinates have no common divisor other than unity. It is primitive to an integer m when its coordinates are all prime to m . Every primary tettarian is also primitive. 287. Theorem. Let y be a primitive integral tettarian and $N(y) = p_1 q_1 \dots t_1$ where $p, q, \dots t$ are the prime factors of $N(y)$. Then y can be decomposed in only one way into the form $y = n_1 x_1 + T_j \cdot e$ where e is a unit tettarian, and $n_1 n_{ai}$ are prime tettariations of norm p , i, o , are prime tettariations of norm q , $r_t T_{fc}$ are prime tettariations of norm t . The product of each l successive factors is primary,...
