Hav Ing explained the first six books of EUclid, with the eleventh and twelfth, which may serve for geometrical elements; and having also taught the plain Trigonometry; we are now to subjoin some corollaries which are easily deduced from them, that contain practical rules of great use in the affairs of life, concerning the mensuration of lines, angles, surfaces, and solids. This treatise of practical Geometry is divided into three parts. In the first, we treat of the mensuration of lines and angles; to which we have subjoined Surveying. In the second, we treat of surfaces; not of such as fire plain only, but of some curve surfaces A likewise 5 likewise; as of the surface of the cylinder, cone, and sphere; and of those parts of the sphere which we have frequently occasion to consider. It is shewn...
